

Besam Universal Exchange Kit For Sliding Doors UniSlide Service Upgrade Kit

Why pay for new, when you can exchange?

If properly maintained, automatic doors provide many years of reliable service. The majority of automatic door repairs are reasonable, but occasionally, much like your automobile, a costly component may need to be replaced. The harder the part is to find, or in cases where the spare part is no longer available on the market, the more expensive it can be. When faced with such a decision, you may even investigate replacing your automatic door equipment as opposed to repairing.

Besam has a cost-effective alternative. If your aluminium, header, doors, and glass are in good shape, you should consider the Besam UniSlide Service Upgrade Kit. Much like replacing an automobile motor if the car body is sound, the Service Upgrade Kit provides you with a new automatic door operator, keeping your existing frame and glass.

By using this approach, you get a brand new automatic door mechanism for a fraction of the cost of a completely new door, along with the confidence that spare parts will be available in the future.

How it works

The Service Upgrade Kit consists of a drive unit, control unit and a transmission. The components are electro-mechanical, state-of-the-art, utilizing the most current technology available. After an inspection insuring that your header, frame, and glass are in suitable condition, the Service Upgrade Kit is installed into your existing sliding door header. Your automatic door drive train is now as good as new.

The cost advantage

The Service Upgrade Kit saves you significant money while getting your door operating as quickly as possible. With a Service Upgrade Kit you only pay for the equipment and installation as opposed to buying a new door, where you will pay for the equipment, glass and glazing and installation. If you have existing sliding door leaves in good working condition, you will save a great deal of money with the Service Upgrade Kit.

What type of operators?

All Besam sliding door operators and most types of operators from competitors can be exchanged with the Service Upgrade Kit. Consult with your Besam representative to be sure it fits your operator.

What about sensors?

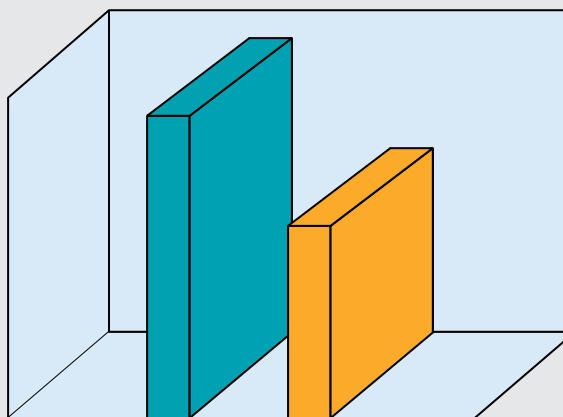

Your Besam representative will inspect your sensors to determine if they comply with current standards.

Will this help with mechanical problems?

The Service Upgrade Kit is a comprehensive upgrade of the operator. If you have floor guide and track problems, doors out of square, or other equipment issues, these will need to be addressed separately.
